Board Profiler MP

Board Profiler with Multi Point Sensors

Board Profiler MP

NEW! Board Profiler with Multi Point Sensors!

LIMAB Board Profiler MP measures the complete profile of boards in transversal conveyors with a very high accuracy. The Multi Point Sensor deliver every 6th millimetre a profile scan of the board and has a measurement speed of 3000 scans/second. The system is ideal for high-speed scanning of boards for optimization and grading applications in the harsh sawmill environment.

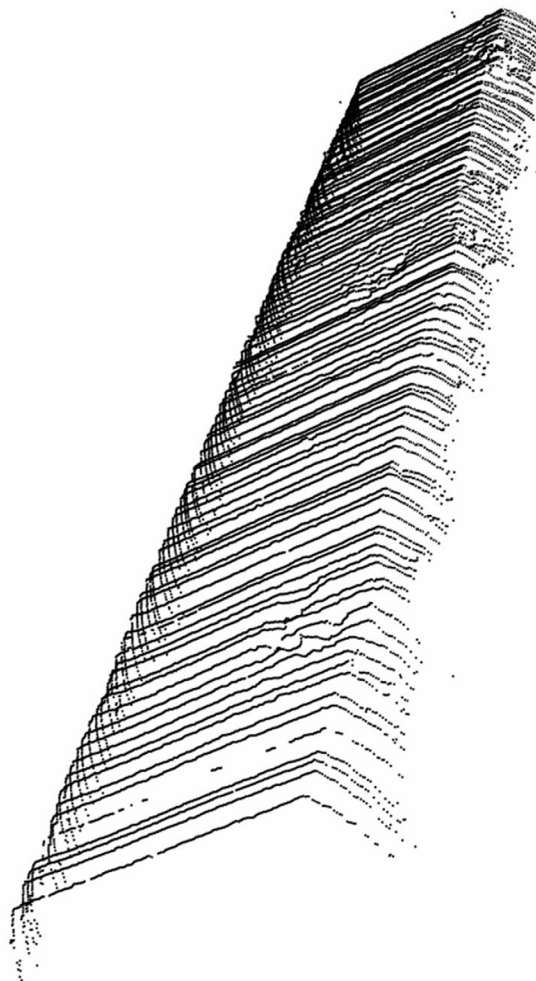

The system includes a Windows based PC with software that supplies you with all measurement values you might need, including: complete vane information, optimization of cutting for trimmers, reject/turning before edgers etc.

All information the Board Profiler provides will be logged in the system and can afterwards be used in e.g. Windows Excel program for your internal use. The system shows complete graphs of the structure and crosscut profile of each board etc.

Ethernet network communication.

Telephone modem for easy remote service and diagnosis.
